

MedtechInsurance

Health and safety software solutions for caring employers

A word from the founders and medical advisors

The travel Insurance industry is currently mis-pricing policies and inaccurately assessing risk following a cardiac medical event or procedure.

Demand for travel insurance as well as premiums and denials are increasing significantly due to greater demand from aging baby boomers with underlying medical conditions.

We have developed an evidence-based, technology-driven calculator of short-term medical risk. A more accurate assessment of risk allows insurance companies to gain market share by increasing the number of potentially insurable travellers while simultaneously reducing payouts arising from medical claims.

Insurance companies adjusting their underwriting criteria with our evidenced-based tool will have a competitive market advantage for better selecting insurable clients while statistically lowering their risk.

As loss ratios reduce, travellers would also benefit, not only from insurability for earlier travel, but also in the long term with lower premiums yet greater margins.

Furthermore, MedTech Insurance was conceived for the efficient flow of information between subscribers, insurance companies, and treating physicians in a secure manner, protecting privacy.

Software solutions for the travel insurance Industry

- Gain market shares by safely ensuring clients as early after a medical event
- Decrease payout ratios by identifying high risk or uninsurable travellers
- Properly price premiums through accurate risk assessment

MedtechInsurance

Implementing best
practices for today's
leading innovative
companies

OUR PRODUCTS

Short term risk calculator post cardiac event

- Accurately assess short term risk premiums and travel insurability post cardiac event: an efficient technology driven scientific solution
- Safely ensure some travelers as early as 3 months post event and gain new clients & market shares
- Accurately price higher premiums and assess travel insurability 3 to 12 months post cardiac events
- Efficiency, privacy & personal health information: improving the flow of information between subscribers, insurance companies, and treating physicians through technology

Cardiac events assessment include:

- Acute coronary syndrome/angina/heart attack/percutaneous transluminal coronary angioplasty (PTCA), coronary artery bypass graft (CABG)
- Heart failure
- Pacemaker
- Atrial fibrillation

OUR TEAM

Brigitte Fontaine

President & CEO

Dr Christian Lamarre
